Business Sales Performance Analysis

Project Overview

- This project focuses on analyzing business sales data to understand overall performance across different categories, regions, and time periods.
- The analysis highlights key metrics such as **sales, profit, and discount patterns** to derive meaningful business insights.
- The dashboard provides a clear view of how different factors influence revenue and profitability.

Objective

- To evaluate category-wise sales and profit performance.
- To analyze the impact of discounts on overall business outcomes.
- To identify yearly trends in sales, profit, and discount.
- To highlight high-performing and low-performing categories.

Problem Statement

- Businesses struggle to identify which categories generate the highest revenue and profit.
- It is difficult to understand whether discounts improve or reduce profitability.
- Tracking changes in sales and profit over time is challenging without proper visualization.
- This project addresses these challenges through a structured analysis dashboard.

Tools and Technologies

- **Excel & Power Query** – Data cleaning and transformation
- **DAX (Data Analysis Expressions)** – Calculations and measures
- **Power BI** – Data visualization and dashboard development

Key Insights

- Some categories generate high sales but lower profit, indicating margin issues.
- Higher discounts do not always increase profitability and may reduce profit.
- Sales show growth over time, while profit varies based on discount strategies.
- No-discount sales provide a clearer view of baseline performance.

Conclusion

- Focus on high-profit categories to improve overall business performance.
- Control discount strategies to protect profit margins.
- Monitor categories with high sales but low profit for improvement.
- Use data-driven insights for better decision-making and business growth.
